

Janus Short-Term Bond Fund

JANUS®

Investment Environment

The Trump administration's pro-growth initiatives fueled investor optimism early on. Throughout the quarter, however, market participants began reassessing the Trump reflation trade and the likelihood of the administration successfully executing its policy agenda. The dollar weakened and investors' inflation expectations tapered. Nominal Treasury yields were largely range-bound, while risk markets – including equities and corporate credit – remained strong due to decent corporate fundamentals and synchronous global growth.

The U.S. economy continued to improve, according to economic data releases. Consumer and business confidence surveys registered multi-year highs, reflecting overall positive sentiment around the economic outlook. The labor market strengthened and key inflation measures ticked higher. This backdrop supported the Federal Reserve's (Fed) decision to raise interest rates by a quarter of a percentage point at its March meeting. Later in the period, Republicans abandoned their replacement plan for the Affordable Care Act, which increased doubts around the government's ability to effectively implement new fiscal policies. A rise in U.S. shale production and a drop in global crude oil prices created additional unease.

Despite climbing in the days leading up to the Fed meeting, nominal Treasury yields hovered in a tight band. The yield on the 2-year note closed March at 1.25%, up from 1.19% in December. While corporate credit spreads fluctuated over an eventful March, they ultimately finished tighter for the quarter. Gains were more notable in high yield.

Performance Discussion

The Fund performed in line with its benchmark, the Bloomberg Barclays 1-3 Year U.S. Government/Credit Index, for the three months ending March 31, 2017.

We maintained our opportunistic approach to corporate credit during the quarter. Our analysts continued to identify opportunities in bank loans, the lower rated tiers of investment grade and shorter dated issues within high yield. We emphasized securities that can out carry the index. Carry is a measure of excess income generated by the Fund's holdings. While we added back duration year-to-date, we remain defensive on rates. An actively tightening Fed is likely to pressure short-term rates higher. Therefore, our exposure to U.S. Treasury securities is near the low end of our historical range.

With front-end yields climbing over the quarter, the Fund's underweight allocation to Treasuries was a leading contributor to relative results. Our overweight allocation to investment-grade corporate credit also positively supported performance. The asset class benefited from modest spread tightening. An out-of-index position in high yield further boosted results, as "riskier" assets performed well during the period. Our focus on securities that can provide greater spread carry than the index also proved beneficial. Duration and yield-curve positioning partially offset these gains.

An out-of-benchmark allocation to bank loans weighed on relative performance. A number of refinancing initiatives took place during the quarter, which created a headwind for performance in the out-of-index asset class. We remain constructive on loans, as the coupons on these floating-rate instruments will benefit from a tightening Fed and subsequently higher LIBOR rates. In the months ahead, we expect loans –

Executive Summary

- The Fund performed in line with its benchmark during the quarter.
- Asset allocation and spread carry were strong contributors to performance, while duration and yield curve positioning detracted.
- We expect both Treasury yields and corporate-credit spreads to be range-bound in the months ahead.

which have a senior position in the capital structure – to offer stable and attractive risk-adjusted opportunities with lower volatility than the high-yield market.

At the credit sector level, banking led relative contributors. The sector generally benefited from the prospect of a more relaxed regulatory environment under the Trump administration and

rising interest rates, which help pad net interest income. No other credit sector materially affected relative performance.

Our emphasis on prudent position sizes and maintaining a well-diversified portfolio resulted in minimal performance impact from individual corporate issuers.

Outlook

Continued improvement in the U.S. economy will afford the Fed the ability to tighten further in 2017. While we expect the central bank to hike – when it can – to normalize interest rates, we believe increases will be measured in order to avoid derailing economic growth. We will be monitoring inflationary pressures to see if the Fed's targets are achievable. It is too soon, in our view, for the central bank to begin unwinding its investment portfolio. That said, we are closely following Fed rhetoric and plans for leadership changes as Chair Janet Yellen's term nears its end. We anticipate the Fed will first step away from reinvesting the mortgage-backed securities (MBS) portion of its portfolio. Once that occurs, a steady unwinding of the portfolio is likely to widen mortgage spreads by a modest amount.

Shifting monetary policy may pressure front-end yields higher over the remainder of the year. However, attractive returns relative to other safe-haven debt should entice foreign buyers and keep Treasuries range-bound, particularly on the long end of the curve. We will continue to actively manage duration and yield curve positioning, with the expectation of maintaining duration below that of the benchmark.

Both investment-grade and high-yield corporate credit spreads have compressed through their 10-year averages, and demand

remains robust as investors reach for yield. With rates set to rise, we are closely watching the ability for spreads to hold near current levels. Successful implementation of tax reforms, deregulation initiatives and infrastructure spending could bolster corporate fundamentals and support further spread tightening. However, we are mindful of the potential for additional reform disappointment by the Trump administration, specifically where taxes are concerned. We expect spreads to trade in a tighter band as investors await the next steps.

Looking to corporate earnings, our analysts will be evaluating the extent to which healthy consumer and business confidence data translates into first quarter results, and ultimately into first quarter gross domestic product growth. We are also watching for any uptick in merger and acquisition activity, which could generate sector volatility and create buying opportunities. As we seek strong risk-adjusted issues in corporate credit, our focus remains on higher quality business models, free-cash-flow generation potential and management teams committed to a sound balance sheet. In our view, responsible position sizing and security avoidance will be valuable tools in navigating the months ahead. Our objective is to participate in spread tightening while keeping capital preservation at the forefront.

Top Relative Contributing and Detracting Issuers Held for the Quarter Ended 3/31/17

Top Contributors	Average Weight (%)	Relative Contribution (%)	Top Detractors	Average Weight (%)	Relative Contribution (%)
U.S. Treasury Notes/Bonds	13.82	0.07	Broadcom Corp	0.84	-0.01

The holdings identified in this table, in compliance with Janus policy, do not represent all of the securities purchased, held or sold during the period. To obtain a list showing every holding as a percentage of the portfolio at the end of the most recent publicly available disclosure period, contact 877.33JANUS (52687) or visit janus.com/advisor/mutual-funds.

Relative contribution is the difference between the issuer's contribution to the portfolio's performance versus that issuer's contribution to the benchmark's performance. It reflects how the portfolio's holdings impacted return relative to the benchmark. Cash and issuers not held in the portfolio are excluded.

Discussion is based on the performance of Class I Shares.

As of 3/31/17 the top ten portfolio holdings of Janus Short-Term Bond Fund are: BellSouth LLC (2.41%), Wells Fargo Bank NA (2.40%), CIT Group Inc (1.99%), Anheuser-Busch InBev Finance Inc (1.53%), Citigroup Inc (1.51%), Bank of America Corp (1.47%), Morgan Stanley (1.40%), Actavis Inc (1.39%), American Tower Trust #1 (1.38%) and United States Treasury Note/Bond (1.34%). There are no assurances that any Janus portfolio currently holds these securities or other securities mentioned in this commentary.

The opinions are as of 3/31/17 and are subject to change at any time due to changes in market or economic conditions. Janus may have a business relationship with certain entities discussed. The comments should not be construed as a recommendation of individual holdings or market sectors, but as an illustration of broader themes.

For fixed income portfolios, relative contribution is calculated by rolling up securities by issuer and comparing the daily returns for securities in the portfolio relative to those in the index. Relative contribution is based on returns gross of advisory fees, and may differ from actual performance.

Performance may be affected by risks that include those associated with non-diversification, portfolio turnover, short sales, potential conflicts of interest, foreign and emerging markets, initial public offerings (IPOs), high-yield and high-risk securities, undervalued, overlooked and smaller capitalization companies, real estate related securities including Real Estate Investment Trusts (REITs), derivatives, and commodity-linked investments. Each product has different risks. Please see the prospectus for more information about risks, holdings and other details.

Fixed income securities are subject to interest rate, inflation, credit and default risk. The bond market is volatile. As interest rates rise, bond prices usually fall, and vice versa. The return of principal is not guaranteed, and prices may decline if an issuer fails to make timely payments or its credit strength weakens.

Foreign securities are subject to additional risks including currency fluctuations, political and economic uncertainty, increased volatility, lower liquidity and differing financial and information reporting standards, all of which are magnified in emerging markets.

High-yield/high-risk bonds, also known as "junk" bonds, involve a greater risk of default and price volatility than U.S. Government and other high quality bonds. High-yield/high-risk bonds can experience sudden and sharp price swings which will affect net asset value.

Bloomberg Barclays 1-3 Year U.S. Government/Credit Index measures Treasuries, government-related issues and corporates with maturity between 1-3 years.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.
