Equity country, regional, sector and industry weights based on MSCI and GICS classifications. Fixed income country, regional, sector and industry weights based on Barclays classifications.

A Fund's performance may be affected by risks that include those associated with nondiversification, non-investment grade debt securities, high-yield/high-risk securities, undervalued or overlooked companies, investments in specific industries or countries and potential conflicts of interest. Additional risks to a Fund may also include, but are not limited to, those associated with investing in foreign securities, emerging markets, initial public offerings, real estate investment trusts (REITs), derivatives, short sales, commodity-linked investments and companies with relatively small market capitalizations. Each Fund has different risks. Please see a Janus prospectus for more information about risks, Fund holdings and other details.

Fixed income securities are subject to interest rate, inflation, credit and default risk. The bond market is volatile. As interest rates rise, bond prices usually fall, and vice versa. The return of principal is not guaranteed, and prices may decline if an issuer fails to make timely payments or its credit strength weakens.

For Lipper Best Individual Funds, the calculation periods extend over 36, 60 and 120 months. The highest Lipper Leader for Consistent Return (Effective Return) value within each eligible classification determines the fund classification winner over 3, 5 or 10 years as of 12/31/15 and no other time periods. 312 Mixed-Asset Target Allocation Moderate Funds were eligible for this award for the 10-year period. Only eligible investors may purchase Class D Shares. See a prospectus for eligibility requirements and other available share classes.

A Fund's portfolio may differ significantly from the securities held in an index. An index is unmanaged and not available for direct

investment; therefore its performance does not reflect the expenses associated with the active management of an actual portfolio.

S&P 500® Index measures broad U.S. equity performance. **Bloomberg Barclays U.S. Aggregate Bond Index** is a broad-based measure of the investment grade, US dollar-denominated, fixed-rate taxable bond market. **Balanced Index** is an internally-calculated, hypothetical combination of total returns from the S&P 500® Index (55%) and the Bloomberg Barclays U.S. Aggregate Bond Index (45%). **Alpha** compares the risk-adjusted performance of a portfolio to a benchmark index. A positive alpha means the portfolio has outperformed the index on a risk-adjusted basis. **Beta** is a measure of the volatility of a portfolio in comparison to a benchmark index. Less than one means the portfolio is less volatile than the index, while greater than one indicates more volatility than the index. **R-Squared (R²)** represents the percentage of the portfolio's performance that can be explained by the general movements of a benchmark index. An R² of 1.00 indicates perfect correlation to the index and an R² of 0.00 indicates no correlation. The lower the R², the more the portfolio's performance is affected by factors other than the market as measured by that benchmark index. **Standard deviation** measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance by dividing the portfolio's excess returns (returns above a "risk-free" rate such as a Treasury bill) by the standard deviation of those returns. The higher the ratio, the better the portfolio's return per unit of risk.

Shared.*, to the programs offered through *Janus Labs*, a wide range of innovative tools can help you deepen your expertise, build your practice and communicate with clients.

If the mergers are approved, products will be renamed during the second quarter of 2017 and Henderson mutual funds will be merged into the Janus Henderson fund family. We look forward to the opportunity to serve you as the combined Janus Henderson Investors.
